It is understood that the examples described above in no way serve to limit the true scope of this invention, but rather are presented for illustrative purposes. All publications, sequences of accession numbers, and patent applications cited in this specification are herein incorporated by reference as if each individual publication, accession number, or patent application were specifically and individually indicated to be incorporated by reference.

5

#### WHAT IS CLAIMED IS:

2

Tables 2A-80.

A method for determining the presence or absence of a pathological cell in a 1 1. patient, said method comprising detecting a nucleic acid comprising a sequence at least 80% 2 identical to a sequence as described in Tables 2A-80 in a biological sample from said patient, 3 thereby determining the presence or absence of said pathological cell. 4 The method of Claim 1, wherein: 2. 1 a) said pathology is described in Table 1, including a cancer; and/or 2 b) said biological sample comprises isolated nucleic acids. 3 The method of Claim 1, wherein said biological sample is tissue from an organ 3. 1 which is affected by said pathology of Table 1, including a cancer. 2 The method of Claim 2, wherein said nucleic acids are mRNA 4. 1 5. The method of Claim 2: 1 a) further comprising a step of amplifying nucleic acids before said step of detecting 2 said nucleic acid; or 3 b) where said detecting is of a protein encoded by said nucleic acid. 4 1 6. The method of Claim 1, wherein said nucleic acid comprises a sequence as 2 described in Tables 2A-80. 7. The method of Claim 2, wherein: 1 a) said detecting step is carried out by: 2 i) using a labeled nucleic acid probe; 3 ii) utilizing a biochip comprising a sequence at least 80% identical to a sequence 4 5 as described in Tables 2A-80; or iii) detecting a polypeptide encoded by said nucleic acid; or 6 7 b) said patient is: i) undergoing a therapeutic regimen to treat said pathology of Table 1; or 8 9 ii) is suspected of having said pathology or cancer. An isolated nucleic acid molecule comprising a sequence as described in 1 8.

| 1 | 9. The nucleic acid molecule of Claim 8, which is labeled.                                  |
|---|---|
| 1 | 10. An expression vector comprising the nucleic acid of Claim 8.                            |
| 1 | 11. A host cell comprising the expression vector of Claim 10.                               |
| 1 | 12. An isolated polypeptide which is encoded by a nucleic acid molecule                     |
| 2 | comprising a sequence as described in Tables 2A-80.   |
| 1 | 13. An antibody that specifically binds a polypeptide of Claim 12.                          |
| 1 | 14. The antibody of Claim 13:   |
| 2 | a) conjugated to an effector component;   |
| 3 | b) conjugated to a detectable label, including a fluorescent label, a radioisotope, or a    |
| 4 | cytotoxic chemical;   |
| 5 | c) which is an antibody fragment; or  |
| 6 | d) which is a humanized antibody.   |
| 1 | 15. A method for specifically targeting a compound to a pathological cell in a              |
| 2 | patient, said method comprising administering to said patient an antibody of Claim 13,      |
| 3 | thereby providing said targetting.  |
| 1 | 16. A method for determining the presence or absence of a pathological cell in a            |
| 2 | patient, said method comprising contacting a biological sample with an antibody of Claim 13 |
| 1 | 17. The method of Claim 16, wherein:  |
| 2 | a) said antibody is conjugated to:  |
| 3 | i) an effector component; or  |
| 4 | ii) a fluorescent label; or   |
| 5 | b) said biological sample is a blood, serum, urine, or stool sample.                        |
| 1 | 18. A method for identifying a compound that modulates a pathology-associated               |
| 2 | polypeptide, said method comprising the steps of:   |

polypeptide, said method comprising the steps of:

| 3  | a) contacting said compound with a pathology-associated polypeptide, said          |
|----|--|
| 4  | polypeptide encoded by a polynucleotide that selectively hybridizes to a sequence  |
| 5  | at least 80% identical to a sequence as described in Tables 2A-80; and             |
| 6  | b) determining the functional effect of said compound upon said polypeptide.       |
| 1  | 19. A drug screening assay comprising the steps of:                                |
| 2  | a) administering a test compound to a mammal having a pathology of Table 1 or a    |
| 3  | cell isolated therefrom; and   |
| 4  | b) comparing the level of gene expression of a polynucleotide that selectively     |
| 5  | hybridizes to a sequence at least 80% identical to a sequence as described in      |
| 6  | Tables 2A-80 in a treated cell or mammal with the level of gene expression of said |
| 7  | polynucleotide in a control cell or mammal, wherein a test compound that           |
| 8  | modulates said level of expression of the polynucleotide is a candidate for the    |
| 9  | treatment of said pathology.   |
| 10 |  |

#### INTERNATIONAL SEARCH REPORT

International application No.

PCT/US02/36810

| Box I Observations where certain claims were found unsearchable (Continuation of Item 1 of first sheet)  |  |  |  |  |
|--|--|--|--|--|
| This international report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:  |  |  |  |  |
| Claim Nos.: because they relate to subject matter not required to be searched by this Authority, namely:   |  |  |  |  |
| Claim Nos.:  because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:   |  |  |  |  |
| Claim Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule  |  |  |  |  |
| 6.4(a).  |  |  |  |  |
| Box II Observations where unity of invention is lacking (Continuation of Item 2 of first sheet)  |  |  |  |  |
| This International Searching Authority found multiple inventions in this international application, as follows: Please See Continuation Sheet  |  |  |  |  |
| <ol> <li>As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.</li> <li>As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.</li> <li>As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:</li> </ol> |  |  |  |  |
| 4. No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.: 1-7, SEQ ID NO: 19  Remark on Protest  The additional search fees were accompanied by the applicant's protest.  No protest accompanied the payment of additional search fees.  |  |  |  |  |
| ;<br>  |  |  |  |  |

Form PCT/ISA/210 (continuation of first sheet(1)) (July 1998)

PCT/US02/36810

#### BOX II. OBSERVATIONS WHERE UNITY OF INVENTION IS LACKING

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.

Group I, claim(s) 1-7, drawn to a special technical feature of a method for determining presence or absence of a pathological cell in a patient, said method comprising detecting a nucleic acid comprising a sequence at least 80% identical to a sequence as described in Tables 2A-80 in a biological sample from said patient, thereby determining the presence or absence of said pathological cell.

Group II, claim(s) 8-11, drawn to a special technical feature of an isolated nucleic acid molecule comprising a sequence as described in Tables 2A-80, expression vector comprising the nucleic acid and a host cell comprising the expression vector.

Group III, claim(s) 12, drawn to a special technical feature of an isolated polypeptide which is encoded by an isolated nucleic acid molecule comprising a sequence as described in Tables 2A-80.

Group IV, claim(s) 13, 14, drawn to a special technical feature of an antibody which specifically binds to polypeptide of claim 12.

Group V, claim(s) 15, drawn to a special technical feature of a method for specifically targeting a compound to a pathological cell in a patient, comprising administering to a patient an antibody of claim 13.

Group VI, claim(s) 16, 17, drawn to a special technical feature of a method for determining the presence or absence of a pathological cell in a patient, comprising contacting a biological sample with an antibody of claim 13.

Group VII, claim(s) 18, drawn to a special technical feature of a method for identifying a compound that modulates a pathology-associated polypeptide by contacting the compound with a pathology-associated polypeptide encoded by a polynucleotide which selectively hybridizes to a sequence at least 80% identical to a sequence described in Tables 2A-80 and determining the functional effect of the compound on the polypeptide.

Group VIII, claim(s) 19, drawn to a special technical feature of a drug screening assay comprising the steps of: administering a test compound to a mammal having pathology of Table 1 or a cell isolated therefrom; comparing the level of gene expression of a polynucleotide which selectively hybridizes to a sequence at least 80% identical to a sequence described in Tables 2A-80 in a treated cell or mammal with the level of gene expression of the polynucleotide in a control cell or mammal.

The inventions listed as Groups I-VIII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: claim 8 is anticipated by a sequence with accession No. BB440042 (Table 2A, first entry) (July 25, 2000), therefore there is no contribution of claim 8 over prior art.
